

# SPOTAIR®

## Movable industrial air conditioner

### SAC-45

All the compressors use Japan brand

50 thousand sets have been successfully sold in Japan within several years.

#### The characteristics

This product uses currently international advanced technology as the prototype and then elaborated through the improvement and upgrading by our company. It is equipped with series of advanced, high efficient and energy saving parts such as rotary sealed heat compressor, hydrophilic membrane inner thread heat exchanger etc. The product has light type of volume, strong cooling strength and stable performance, the two cold air vent can automatically rotate, it is equipped with multiple protectors and make you care-free during the process of operation. This product is convenient to use and it can be used immediately after purchase and without installation. So it can be widely applicable in the locations that have requirements to the local cooling effect, e.g., equipments factory, workshop and CNC, computer controller etc. The product has good cooling effect to these equipments.

- The two cold air vents can rotate freely for about 75°.
- The cold air vent position can also be freely changed manually.
- The heat air vent can extend up to 3M to discharge heat out doors.

This kind of machine has 3 items of patents

#### Specifications

Model	SAC - 45(75° Dual rotary wind )	
Power source	Single phase 220V	Three phases 200V
Frequency	50Hz	50/60Hz
Input power	1700W	1800W
Cooling volume	4500W ( 15300BTU )	
Compressor	Sealed rotary type	
Coolant	R22、R407C	
Noise	≤55dB	
Outside dimensions	W520 x D470 x H1100	
Weight	71kg	
Packing quantity	144 Sets/40' HQ, 35 Sets/20'	

#### Applications

It is widely applied in the radiation of the machinery, it can make the local space cool down rapidly, assure the normal operation of the machinery equipments, elongate the service life of the machinery, reduce the repairing cost and increase the production quality and efficiency.
